

Published Studies & Reports

SRBC scientists publish various studies and reports each year in our library that may be of interest to students and teachers including:

- **Stream Salinization** - 3 phase study examining the effects of road salt on freshwater streams with impacts to aquatic animal and plant life analyzed.
- **American Eel Restoration** - Technical summaries of post-stocking monitoring data related to a basinwide reintroduction effort that began in 2005.
- **Harmful Algal Blooms** - Ongoing research to better understand and predict outbreaks to prevent harm to human health and economic impact.

Other Publications

- **Natural Gas Industry** - Comprehensive look at the industry's water use.
- **Climate Change** - Assessment of how changing climatic conditions may impact our water resources.
- **Invasive Fish eDNA** - Our scientists lead the way in eDNA monitoring in the basin.

Climate Change

SRBC data in the classroom

Example Use:

Lycoming College reviews our eel stocking reports for their eel morphology/aquatic organism passage study. They're comparing elvers they've raised into yellow eels with annual young elvers we deliver each year through our *Eels in the Classroom (EIC)* program.

By the way, our *EIC* program provides juvenile American eels to students to raise and ultimately release back into the Susquehanna River Basin. There is currently a wait list for participation.

EIC
