Surface Water Withdrawal Application Tunkhannock Creek Project Summary

SRBC Pending No.: 2024-084

This summary is only a portion of the application materials and is meant to provide general information about the proposed project.

Project Sponsor

Company Name: Coterra Energy Inc.

Address: 2000 Park Lane, Suite 300

State: PA

City: Pittsburgh

Zip Code: 15275

Contact Person: Angie Harakal

Title: EHS Specialist

Telephone: (412) 249-3850

Fax:

Mobile:

Email: angie.harakal@cabotog.com

Requested Surface Water Withdrawal Quantity

Projected Design Year: 2029

Existing Withdrawal Quantity: 2(mgd)

Requested Withdrawal Quantity: 2.88(mgd)

Maximum Instantaneous Withdrawal Rate: 2000(gpm)

Estimated Daily Operation: 24(hours/day)

Requested Consumptive Use Quantity - No

Existing Consumptive Use: 0(mgd)

Requested Consumptive Use: 0(mgd)

Pre-Compact/Grandfathered CU: 0

Facility Location

Street Address: 1253 Bacontown Road

State: PA

County: Wyoming

Municipality: Nicholson Township

Zip Code: 18446

Surface Water Withdrawal Source Information

Source Name: Tunkhannock Creek

Source Type: stream

Subbasin: Middle Susquehanna

**Surface Water Withdrawal
Renewal with Modification Application
Tunkhannock Creek (Mulqueen)
Coterra Energy Inc.
RETTEW Project No: 093292022**

2.1 Project Facility Description

Coterra Energy Inc. (Coterra) is a natural gas exploration company requesting renewal with modification of the approval for a surface water withdrawal of up to 2.880 million gallons per day (mgd) from Tunkhannock Creek located in Nicholson Township, Wyoming County, Pennsylvania. Coterra owns and operates the existing surface water withdrawal facility, which is currently approved under Docket No. 20230903. This renewal application requests to increase the peak day withdrawal amount from the currently approved 2.000 mgd to 2.880 mgd. The maximum instantaneous withdrawal rate of 2,000 gallons per minute (gpm) will stay the same as currently approved. The purpose of the project facility is to provide freshwater for hydrocarbon development and related incidental uses within the Susquehanna River Basin.

When there is adequate flow in Tunkhannock Creek, water is withdrawn via a pump housed in a withdrawal trailer approximately 100 feet southeast of the intake in Tunkhannock Creek. Water is conveyed to the withdrawal trailer via a buried waterline connected to a buried intake structure in Tunkhannock Creek. Withdrawn water is transported via buried water line to storage tanks and truck filling stations on a pad south of the intake. Water is transported from the facility via trucks for consumptive use at approved natural gas well drilling pads. A proposed booster pump station located on the existing truck load out pad will also convey water from the storage tanks off-site via waterlines in the future.
